Open discussion/Q&A

Migration process

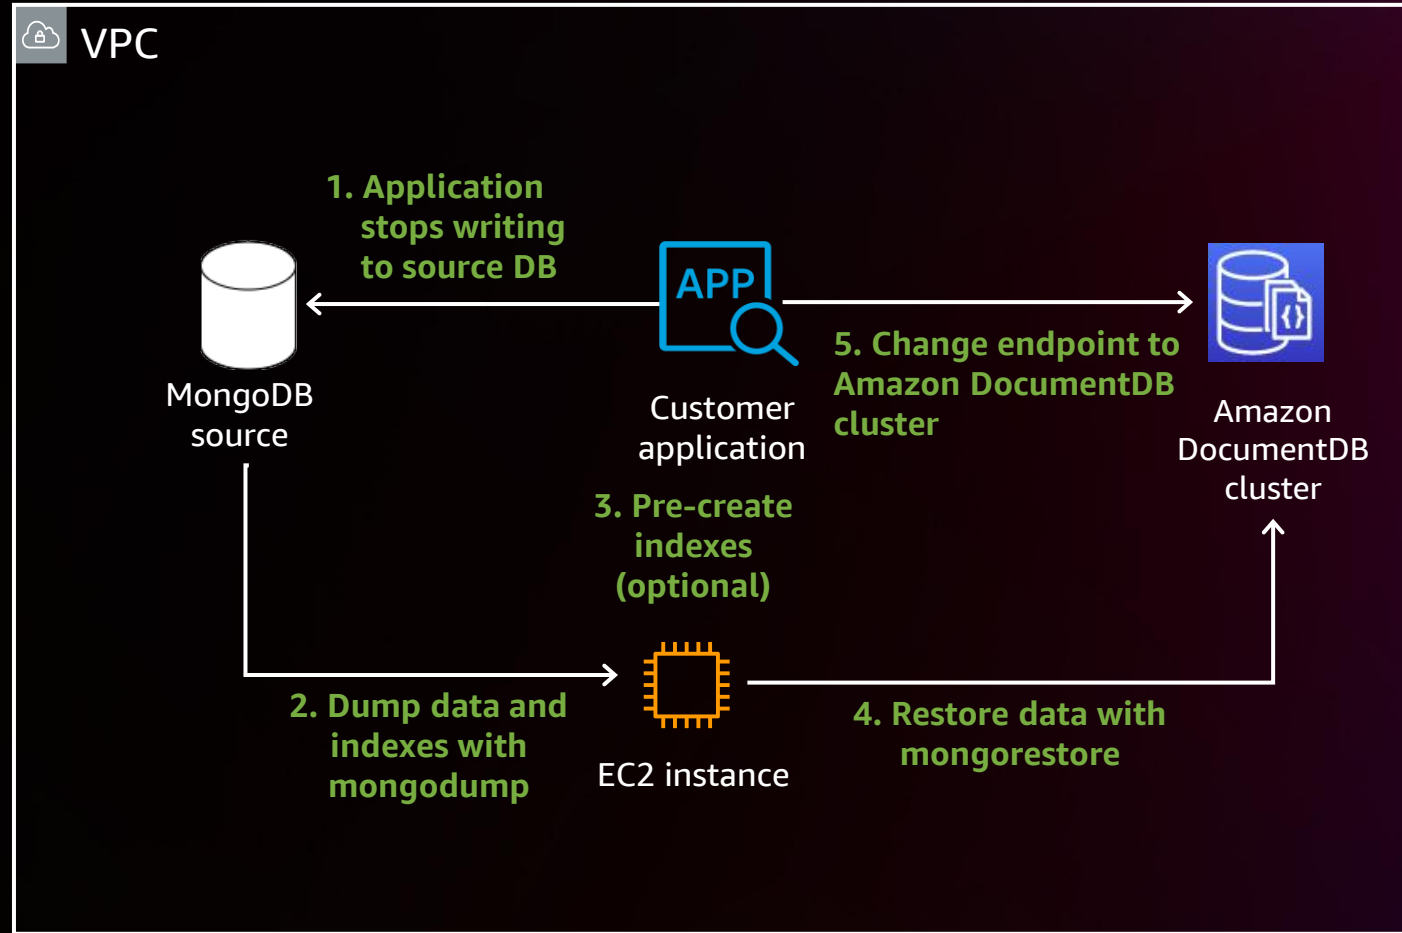

Migration process

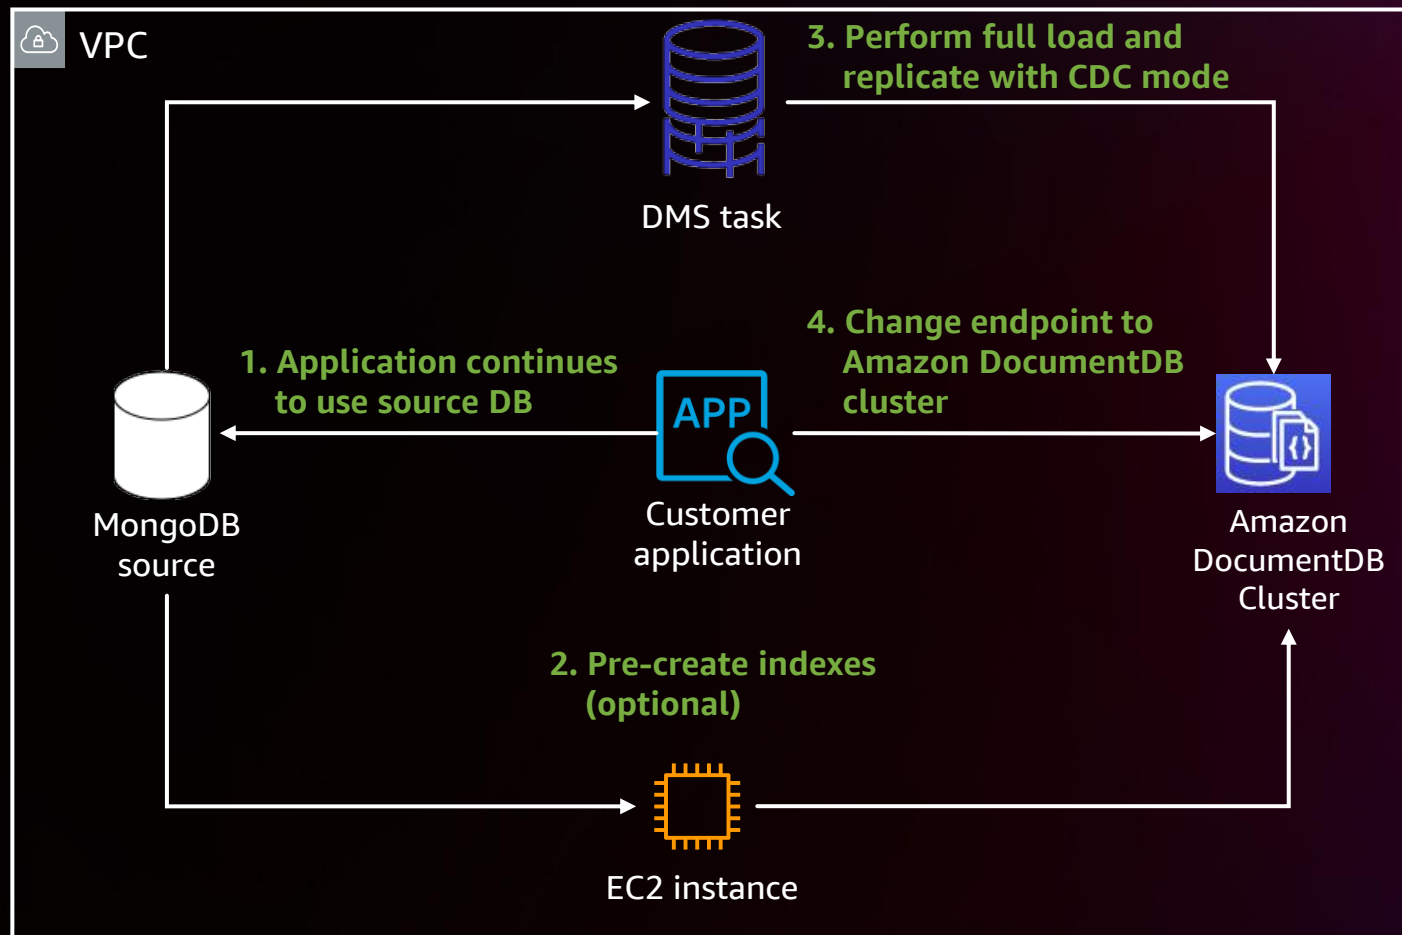

Migration methods

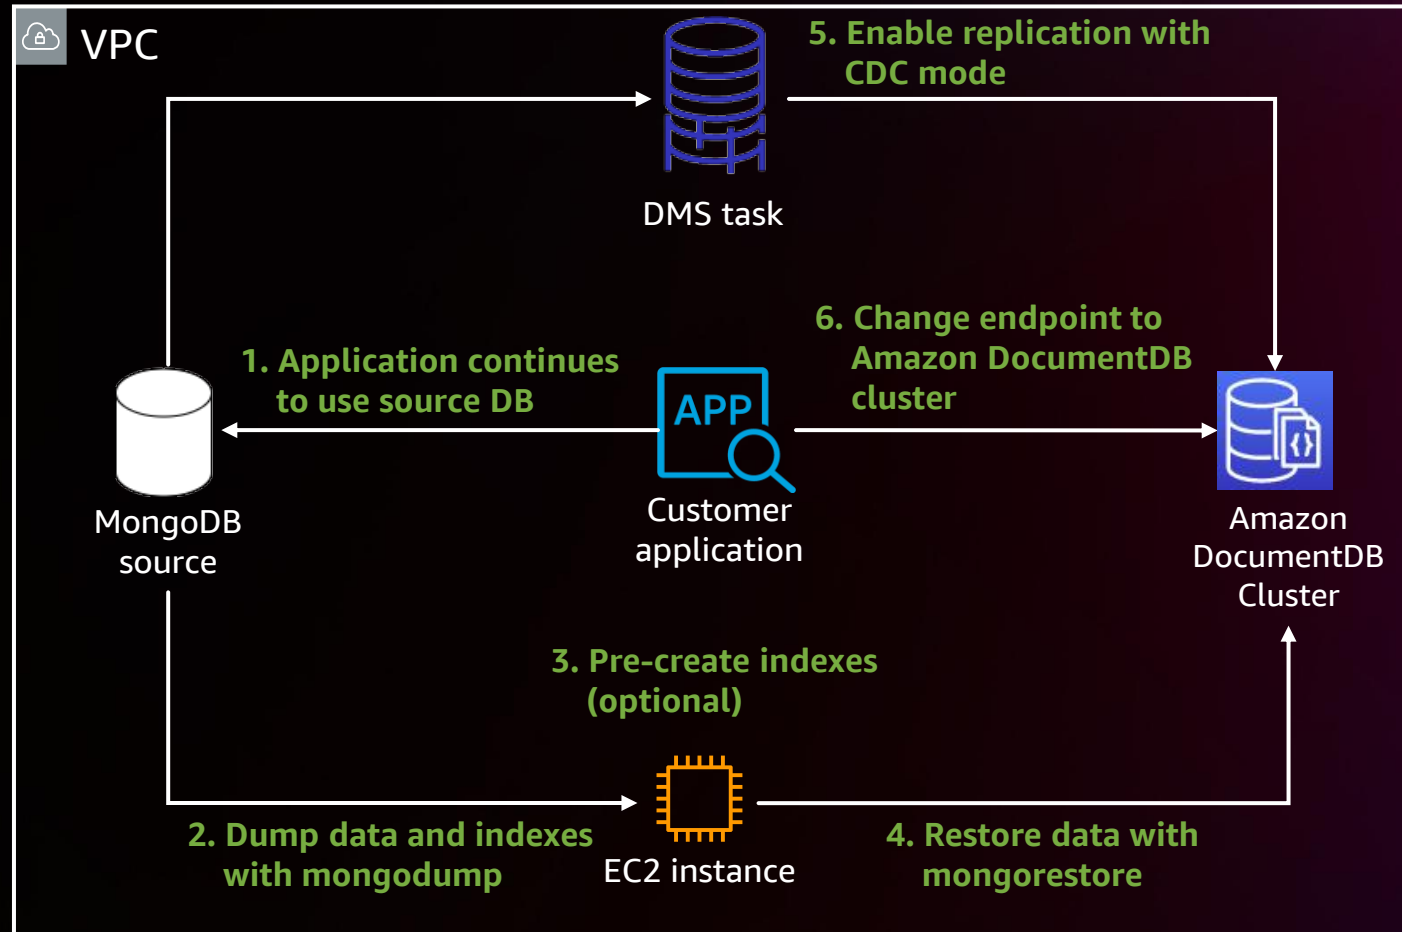

Migration methods – Offline

Migration methods – Online

Migration methods – Hybrid

Tools

AWS Database Migration Service (AWS DMS)

Start a replication instance

Connect to the source and target

Select tables, schemas, or databases

Let AWS DMS create the target objects

Move data and synchronize objects

Switch applications when ready

Compatibility tool

MongoDB API compatible

Applications, drivers, and tools can be used with Amazon DocumentDB with little or no change

Supports hundreds of APIs, operators, and stages

Compatibility tool

<https://github.com/awslabs/amazon-documentdb-tools/tree/master/compat-tool>

Index tool

- Migrate indexes between source MongoDB and Amazon DocumentDB
- Find potential compatibility issues
- Run against database or existing dump created with the mongodump tool

<https://github.com/awslabs/amazon-documentdb-tools/tree/master/index-tool>

Change data capture (CDC) synchronization tool

Enables high-speed change data capture from MongoDB source to Amazon DocumentDB

Uses change streams for Amazon DocumentDB migrations

<https://github.com/aws-labs/amazon-documentdb-tools/tree/master/migration/migrator>
